

**THE COMPLETE
ALLERGY SERVICE**

PLEASE PRINT OUT AND HAND TO YOUR VET

Dear Veterinary Surgeon,

Your client is concerned that their animal may be suffering from some form of allergy and has downloaded this information sheet from our dedicated pet owner website www.animal-allergy.com.

Avacta Animal Health provides specialist serological allergy testing services to veterinary surgeons worldwide, in the form of our **SENSITEST®** allergy tests. These tests are standardised, reproducible, are not affected by skin pathologies and the procedure requires minimal clipping, meaning it is aesthetically preferable for owners.

If during your work-up, allergy is identified as a possible cause, Avacta Animal Health may be able to assist with the diagnostic process through our portfolio of tests, including environmental (indoor and outdoor), food, and secondary infections tests (dogs only). We can also provide management products and therapies including allergen-specific immunotherapy and the staphylococcus phage lysate (SPL®) treatment.

For a submission protocol and further information, please contact our Customer Service department on 0800 8494 550 or visit www.avactaanimalhealth.com.

If you're outside the UK, please contact Customer Services on +44 1904 217071 or visit <http://allergy.avactaanimalhealth.com/overseas-vets/> for more information.

A blood sample can be taken whilst the animal is symptomatic and before any steroidal treatment is administered, as we provide a free sample storage service, allowing you time to discuss some options with your client. Simply store the sample serum (refrigerated) and submit on receipt of our submission box.

We appreciate that the diagnosis and management of allergy is a long and difficult process and we hope our experience proves beneficial.

Kind regards,

The Avacta Animal Health Team.
